SUMMARY

Frontend developer with nearly 5 years of experience shipping production websites with Next.js, React and TypeScript. I turn Figma designs into pixel-perfect, reliable interfaces and build fast, SEO-friendly websites. Comfortable working solo or in cross-functional teams. Based in Alicante (CET). Open to remote, hybrid or on-site roles, as well as project-based contract work.

EXPERIENCE

Frontend Developer — Noxtton (Remote) Feb 2022 – Present

Joined as intern (3-month internship), then hired as Frontend Developer. Built 10+ production websites across the company's client projects; most recent below.

Across all projects

– Regular code reviews and helping onboard new developers; daily collaboration with backend, design, product and QA.

PROJECTS

Real estate platform, built solo · w2.ge

– Built the entire frontend from scratch to launch: apartment search and interactive SVG navigation from building down to each unit.

Education platform in 4 countries · xpup.com · digitaledu.ge

– Joined before the full launch and rolled out a new design and content for the CZ and KZ markets.
– Set up a separate CMS and test environment, so the new design could be built and tested while the live GE and GB sites kept running without issues.
– Brought a broken development branch back to life: reviewed 99+ conflicting files between two branches with completely different features and structure, so the team could test and release again.
– Integrated installment payments with Georgian banks.

Real estate platform · maqrocitytbilisi.com

– Built the entire frontend: a multi-language property site with interactive building navigation, the foundation for later real estate projects.

And many other websites, from company sites to landing pages. More in my Portfolio.

TECHNICAL SKILLS

Core: JavaScript, TypeScript, HTML, CSS, SVG
Frameworks: React, Next.js (App Router, SSR/ISR)
Styling: CSS Modules, Tailwind, Responsive & Pixel-Perfect Development
Forms & Data: React Hook Form, Zod, REST APIs, Context API, CMS integration
